- Appendix H: Five-Year Asphalt Concrete Overlay List
- Appendix I: Five-Year Surface Treatment List
- Appendix J: Complete Listing of County Roads

1. Executive Summary

Since 1997, the Public Works Department has maintained a formal pavement management program for documenting road conditions, forecasting pavement maintenance and scheduling maintenance funds for the road network.

An effective Pavement Management program allows the County to optimize the money invested in maintaining paved roads in order to provide the greatest return on investment.

As shown in the table below, the County's Pavement Condition Index (PCI) currently stands at 61 for all 1,092 road miles on a scale of 0-100. The Board of Supervisors has adopted a system wide target of 65 with no classification (Arterial, Collector, and Local) below 60.

This program prioritizes pavement management to optimize limited funds available. This strategy applies the best available pavement preservation techniques and relies on a four-tier system for prioritizing the selection of roads to receive maintenance.

Pavement Conditions in 2014													
Road Classification	PCI for Class	Road Miles	% of Total	Bad 0-20		Poor 21-40		Fair 41-60		Good 61-80		Best 81-100	
				Miles	%	Miles	%	Miles	%	Miles	%	Miles	%
Arterials	72	100	9%	2	2%	6	3%	14	8%	41	12%	38	14%
Collectors	61	401	37%	46	37%	63	36%	67	36%	121	35%	104	39%
Local Roads	58	591	54%	75	61%	108	61%	103	56%	181	53%	125	47%
Total County	61	1,092	100%	123	11%	177	16%	184	17%	343	31%	267	24%

The following table summarizes the four-tier strategy. A more complete description can be found in Chapter 6.

Anticipated Five-Year Plan Results

Tier	Description	Existing Mileage		Forecast Mileage	
1	"Good" Roads	697	63.9%	793	72.6%
2	"Poor" - High Demand Roads	13	1.2%	0	0.0%
3	"Poor" - Medium Demand Roads	125	11.4%	105	9.6%
4	"Poor" - Low Demand Roads	257	23.5%	194	17.8%
Totals		1,092	100%	1,092	100%
Overall PCI		61		59	

Note: Results based on \$11.2 M the first year and \$6.2 M in each of the remaining years.

The Pavement Management Plan considered the following funding scenarios:

- For the expected status quo annual funding level of \$6.2M program (\$4.7M of General Fund with a continuation of \$1.5M from the Road Fund), the PCI declines from 61 to 58 in five years and 56 in ten years.
- By adding a one-time \$3.0M General Fund addition and one time \$3.5M Road Reserves in FY 2015/16 budget, for a total of \$11.2M, the PCI increases from 61 to 62 at the end of FY 2015/16, but then decreases under status quo budget to 59 in five years.
- To attain the Board adopted goal of PCI system level 65 in ten years will require an annual budget of \$10.8M.
- To attain an ideal road condition for preventative maintenance of PCI system level 70 in ten years will require an annual budget of \$13.6M.
- Staff also looked at system conditions if we act on previous Board policy to abandon roads serving less the five parcels (a total of about 12 miles). Given the status budget, there is no measurable change, the PCI would decline from 61 to 58 in five years.

The proposed five-year plan is based on the second scenario above with \$11.7M allocated in the first year and \$6.2M being allocated in each of the following years. This plan will result in the following:

- An overlay of about 20 miles will be completed in the first year and 5 miles in each of the following years.
- Each year 60 miles of Tier 1 (Good) roads will receive surface treatment and continue to be preserved in a good state of repair.
- All 13 miles of Tier 2 roads will be overlayed within the two or three years. These will then become Tier 1 (Good) roads and will require greatly reduced maintenance in future years.
- 27 miles of Tier 3 will be overlayed and become Tier 1 (Good) roads.
- In order to reduce time spent by road crews on pavement patching, approximately 6 miles of selected high maintenance rural roads (Tier 4) will receive a thin maintenance overlay.
- The overall PCI of the road network will drop from the current 61 down to 59 in five years as the remaining Poor roads will further decline.

2. Introduction

The County Board of Supervisors established a vision statement promoting a safe, healthy, livable, prosperous, community and well governed community. This vision is incorporated into the preparation of this Pavement Management Plan. Having a well maintained road system enhances mobility throughout the County and addresses each of these communitywide results. A well-maintained road system supports multi-modal needs of the community and supports emergency response, tourism, commerce, agriculture and recreation. By prioritizing our efforts we have developed the following plan to maximize the benefits to all road users.

Under the budget performance measures, the Board of Supervisors established an overall road system PCI goal of 65 for the road system with no road classification below 60. This keeps the system in a more cost-effective means to maintain.

Road Assets

The road system structures and assets include:

- 1,333 maintained road miles
 - 1,092 miles of paved roads
 - 241 mile on unpaved roads
- 1,220 ADA curb ramps
- 187 bridge structures
- 151 cattle guards
- 17 signalized intersections
- 54 street lights
- 12 flood control basins for roads
- 4,628 under road drainage culverts

Routine vs. Preventative Maintenance

Routine Maintenance consists of day-to-day activities that are scheduled by maintenance staff to maintain and preserve the condition of the roadway system.

Policy on Road System Priorities

It is the policy of the Board of Supervisors to prioritize the funds and resources allocated to the Public Works Department in the following way:

First Priority: Maintenance

- Provide routine maintenance
- Manage pavement resurfacing
- Perform bridge maintenance and replacement

Second Priority: Safety Enhancements

- Reduce collisions with signage/striping
- Improve sight distance and roadsides conditions
- Realign and widen roads

Third Priority: System Betterments

- Implement County bike plan
- Correct deficiencies (drainage “missing links”)
- Improve capacity (circulation studies)
- Implement community street designs

Preventative Maintenance on the other hand consists of minor and major rehabilitation projects. Minor projects are non-structural enhancements made to the existing pavement sections to eliminate age-related surface cracking to extend the life of the existing pavement. Major rehabilitation consists of structural enhancements that both extend the service life of an existing pavement and improve its load-carrying capability.

Routine Maintenance	Preventative Maintenance	Capital Improvement
Pothole patching	Chip seal	Bridge replacement
Thin Maintenance overlay	Microsurfacing	Safety projects
Culvert cleaning	Slurry seal	Bike projects
Crack sealing	Overlays	Road Capacity projects
Shoulder backing	Reconstruction	Streetscape Improvement
Striping / signing		

The overall "Road Fund" budget includes funding for routine maintenance, preventative maintenance and capital improvements. The following chart shows the amount of funding in FY 14/15 for each activity.

3. Pavement Management Background

Of the 1,333 miles of County maintained roads, 1,092 miles are paved with Asphalt Concrete (AC) and two miles are Portland Cement Concrete (PCC) roads. The rest are gravel and not addressed in this report. Since 1997, the Public Works Department has maintained a formal Pavement Management Program (PMP) for assessing pavement conditions and forecasting needed improvements and funds for the system. The purpose of this PMP is to develop the most cost effective means to maintain the road surface with respect to the available budget.

The Board adopted PCI budget goal of 65 had been reduced from a 70 since 2006. The 65 PCI was considered to be attainable, but more importantly represents a minimum level to effectively manage the system.

Pavement Condition Index Category

Figure 3-1
Representative Pavement Maintenance Cost Curve

Typical Cost Per Mile

- Chip sealing roadways cost \$45,000 per mile including prep work by County crews.
- Asphalt overlay contracts have cost between \$300,000 and \$400,000 per mile.

An effective PMP is based upon an understanding of current condition and the increased cost associated with delaying maintenance. As the theoretical curve in Figure 3-1 indicates, it can be four to five times less costly to maintain a pavement with a PCI of 65 than a PCI of 30. Recent experience with County roads reinforces this fact.

The challenge is to maximize preventative action to keep spending at the lower level. This approach is often referred to as pavement preservation (rather than pavement repair).

Table 3-1 Conditions by Road Classification December 30, 2014

Road Classification	PCI for Class	Road Miles	% of Total	Pavement Conditions in 2014							
				Bad 0-20		Poor 21-40		Fair 41-60		Good 61-80	
				Miles	%	Miles	%	Miles	%	Miles	%
Arterials	72	100	9%	2	2%	6	3%	14	8%	41	12%
Collectors	61	401	37%	46	37%	63	36%	67	36%	121	35%
Local Roads	58	591	54%	75	61%	108	61%	103	56%	181	53%
Total County	61	1,092	100%	123	11%	177	16%	184	17%	343	31%
										267	24%

Agencies responsible for road maintenance have developed a pavement maintenance strategy which typically follows one of the following philosophies:

- A. **Worst First:** This approach rehabilitates the poorest roads in the system first. While this seems intuitive, it leads to deferring pavement maintenance until the surface has reached the end of its useful life. The appropriate treatment then requires a pavement overlay or a total road reconstruction. This results in a more expensive solution and is no longer regarded as a good pavement strategy.
- B. **Best First:** This approach focuses on keeping the “good” roads from dropping in the “fair” or “poor” category by applying pavement preservation techniques such as chip sealing at regular intervals. The poor roads would then remain poor and would be treated only if or when the budget becomes available.
- C. **Cost / Benefit:** This approach not only assesses the needs of each individual road (as above) but also considers the demand on the road and its importance to the general public. This approach is most consistent with current Board policy and represents the strategy currently used in this PMP.

South Bay Overlay, Los Osos

Considering fund availability for a PMS program varies each year, it is essential to focus on pavement preservation, which maximizes the available dollars and targets resources on key roads. This report lays out a balanced and tiered approach towards future maintenance expenditures.

4. Pavement Conditions

The road budget has fluctuated over the past decade and pavement conditions reflect these changes. When the economy was stronger, the Department was able to increase the amount spent on pavement management. These expenditures began to bring the overall pavement condition over 70 PCI or into a "Good" category. With the reduction in pavement management funding the overall PCI has dropped below 60 or "Fair". This trend is illustrated in Chart 4-1 below.

Table 4-1 PCI by Community

Pavement Rating by Community	
Community	Average PCI when last inspected in 2013
Avila Beach	76
Cambria	69
Cayucos	72
Los Osos	62
Nipomo	59
Oceano	53
Santa Margarita	86
San Miguel	75
Shandon	65
Templeton	74
Rural Areas	59

*Stuart Avenue, Cayucos following Microsurfacing*

From 2010 to 2012 the number of miles in “Poor” condition has decreased while the number of “Bad” miles increased as shown in Table 4-2. This trend shows the amount of miles for roads with a low PCI will continue to increase in the future.

Table 4-2 Pavement Condition Trends by Category

Pavement Condition	Bad 0-20	Poor 21-40	Fair 41-60	Good 61-80	Best 81-100	Avg. PCI	Deferred Maintenance
Road Miles 2006	11	67	344	365	334	68	\$62,000,000
Road Miles 2007	11	131	316	273	360	65	\$84,125,593
Road Miles 2008	33	164	229	392	273	63	\$103,652,569
Road Miles 2009	43	184	206	379	260	63	\$120,992,730
Road Miles 2010	32	255	325	314	249	62	\$121,072,102
Road Miles 2011	87	196	251	283	294	59	\$155,398,540
Road Miles 2012	109	175	240	273	273	57	\$176,505,675
Road Miles 2014	123	177	184	343	267	61	\$161,696,765

5. Revenue and Expenditures

Road maintenance and improvements in the County are funded from a variety of sources. As funding sources change, the maintenance budget is adjusted accordingly as shown in the chart 5-1. The largest source of revenue for pavement management is the County's General Fund. Declining tax revenue over the past several years resulted in a reduction in General Fund revenue. However, economic conditions have improved slightly with the potential for additional funding in the future.

The second largest source of revenue is from the Highway User Tax Account (HUTA), funded from the gasoline sales tax and Proposition 42. The County also received a one-time revenue of \$3.4M in FY 2009/10 as part of the American Recovery and Reinvestment Act, which was used to overlay Avila Beach Drive, Main Street in Cambria and Lopez Drive. The budgeted HUTA revenue is projected to be \$9.8M in FY 2014/15, however due to reduction in the gas tax by six cents per gallon at the February 2015 Board of Equalization meeting, revenues are expected to decline \$1.3M in FY 2015/16. Roads funding has held steady due to increase in funding from the Transportation Development Act, which offsets HUTA decreases. However it is expected that this downward trend in HUTA funding will continue into the foreseeable future.

Chart 5-1 Historical Pavement Maintenance Expenditures

5.1 Trends in California

The recent *California Statewide Local Streets and Roads Needs Assessment* (see Executive Summary in Appendix B), indicates California's counties maintain 36.5% of the paved miles in the state, but don't receive nearly sufficient State funding to maintain this essential part of the California transportation network. San Luis Obispo County finds itself in a similar condition as other Counties.

The key findings in the 2014 Statewide report:

- There is a significant funding shortfall of approximately \$78.3 billion to bring the local transportation system up-to-date over the next 10 years.
- As pavement conditions deteriorate, the cost of repair increases exponentially; the longer and agency waits, the more it will cost.
- There has been a steady downward trend in the pavement condition since 2008 when the first comprehensive statewide local street and road pavement study was conducted.
- The funding shortfall has grown from \$71.4 billion in 2008 to \$78.3 billion in 2014, an increase of nearly \$7 billion in just six years.
- The majority of California's cities and counties now have an average pavement condition rating that is considered "at risk". Projections indicate that by 2024, a quarter of local streets and roads will be in the "Bad" category.

While bringing the state's local street and road system to a cost-effective best management practice level will require more now, investing in local streets and roads sooner will reduce the need for exponentially more spending in the future.

South Bay Boulevard Pavement Grinding

6. Road Maintenance Strategy

6.1 Forecasted Condition and Funding Needs

Using a conventional maintenance strategy, a minimum annual funding of \$8.8M is required to maintain the road system at the current PCI. Chart 6-1 below is based on a starting point PCI as of December 2014.

In order to maximize use of the available funds (expected to be \$6.2M annually), the PMP must first focus on preserving “Good” roads that have minimal deterioration. Preservation will include applying chip seals, microseals, or other surface treatments.

After preservation demands are met, remaining funds will be allocated first to roads with higher demand. Maintenance will be deferred on roads with lower demand and with a lower PCI until the funding becomes available. In some cases, thin maintenance overlays will be performed by County crews to address road segments that require frequent pavement patching. The County expects that thin overlays will result in an overall cost savings when compared to frequent pavement patching

Minor maintenance such as crack sealing, asphalt patching and shoulder repairs will still need to be performed on a regular basis throughout the road network. This will ensure that all roads adequately provide all-weather access to homes and businesses. Ultimately, with the continued application of this overall maintenance strategy, County roads will eventually have a “Good” pavement condition rating and lower maintenance costs.

Maintenance Strategies

6.2 Preserving the Good Roads: First Tier

First Tier roads include all roads that can be preserved merely with surface treatments. All of the County roads with a PCI greater than 55 are designated as Tier 1. These roads will be effectively maintained with chip seals and microseals.

The PMP allows for approximately half of the Tier 1 roads (698 miles) to be treated with in the next five years. This, requires at least 60 miles of treatment per year to maintain progress. The pace will be accomplished by using County road crews to do the preparation work in advance of the resurfacing work. The chip seal, microseal or other surface treatment will be performed under contract. If treating these roads is deferred, then significantly more expensive overlays or improvements will be required in future years. A complete listing of the proposed five-year plan for these road segments is listed in Appendix I.

Foothill Boulevard Microsurfacing, San Luis Obispo

6.3 Pavement Rehabilitation of the High-Demand Roads: Second Tier

Tier 2 roads are high-demand roads with a low PCI. These deteriorated roads cannot be preserved merely with surface treatments. A high demand road is assumed to have an average daily trip (ADT) demand over 3,000 vehicles per day. With the projected funding, it is anticipated that all of the Tier 2 roads will be overlayed within the next two or three years. Once overlayed, these roads will then become good roads (Tier 1). A complete five-year listing of road segments to be overlayed is presented in Appendix H.

6.4 Maintaining the Medium-Demand Roads – Third Tier

Tier 3 roads are medium-demand roads with a low PCI. Just like Tier 2, Tier 3 roads are deteriorated and cannot be preserved merely with surface treatments. A medium-demand road is assumed to have an average daily trip (ADT) demand between 1,000 and 3,000 vehicles per day or be located within an urban reserve line.

With the projected funding, it is anticipated that 27 miles of Tier 3 roads will be overlayed within five years. Once overlayed, these roads will then become “Good” roads (Tier 1). The remaining Tier 3 roads will be addressed only as funding becomes available. Additional funding in future years will allow for more Tier 3 roads to be improved.

6.5 Maintaining the Low-Demand Roads – Fourth Tier

There are approximately 257 miles of low-demand roads with a low PCI. A low-demand road is assumed to be a rural road with an average daily trip (ADT) demand under 1,000 vehicles per day. These roads would be improved once funding becomes available and after all of the high demand (Tier 2) and medium demand (Tier 3) roads are improved.

In the projected available funding, Tier 4 roads will not be improved within the next five years. These roads will become rough and require lower driving speeds. Maintenance will be limited to only what is required to maintain all-weather access. However, in order to address high maintenance sections of the rural roads, limited funding will be directed, as available, to the road list in Appendix E.

Table 6-1

Tier	Title	Description	Metric
1	“Good” Roads	<ul style="list-style-type: none">• Roads that can be preserved using a surface treatment at lower cost• PCI >55	PCI
2	“Poor” - High Demand Roads	<ul style="list-style-type: none">• ADT > 3,000• PCI < 55• Overlay required	ADT
3	“Poor” - Medium Demand / Urban Roads	<ul style="list-style-type: none">• ADT > 1,000 and < 3,000• Within the URL• PCI < 55• Overlay required	ADT / Urban
4	“Poor” - Low Demand/ Rural Roads	<ul style="list-style-type: none">• ADT < 1,000• Outside the URL• PCI < 55• Overlay required	ADT / Rural

6.6 Maintaining All- Weather Access

It is the Department's highest priority to provide, at a minimum, full all-weather access on all County-maintained roads regardless of demand or pavement condition. On some roads maintenance must generally be limited to pavement patching and repairing problem areas as they are discovered. These roads, with this minimal level of maintenance, will become rough and require drivers to travel at lower speeds. Generally, these roads will be perceived by the public as receiving little or no maintenance.

Country Club Microsurfacing, San Luis Obispo

6.7 Reducing Road Miles

There are a small number of roads in the more rural parts of the County that have very low demand and serve only a few residents. In some other instances, the adjoining property owners have requested that they be allowed to provide their own maintenance. Where this situation applies, the roads could be abandoned and the property owner(s) could be encouraged to take ownership of the road. The Board had previously taken a position that roads serving five parcels or less may warrant abandonment. These roads are shown in Appendix F.

In addition, the Board of Supervisors adopted a policy in 2007 to not take new subdivision roads into the maintained system unless they adhere to the Smart Growth criteria.

6.8 Rehabilitation Techniques

Several types of rehabilitation techniques have been used in maintaining the road system including micro surfacing and chip sealing of the existing pavement, new asphalt overlays, and for pavement reconstruction, cold-in-place recycling. Refer to Appendix C for more details.

7. Five-Year Plan

The PMP strategy is intended as a long-term approach to managing the pavement on County roads. For the near term, a five-year plan to implement these strategies would include the following:

- Surface treat 60 miles of Tier 1 (Good) roads each year for a total of 300 miles. The amount of surface treated roads will increase in future years as the total amount of good roads increases.
- Overlay 13 miles of Tier 2 (High Demand) roads and 27 miles of Tier 3 (Medium Demand) roads over the next five years.
- Provide a thin maintenance overlay for approximately 6 miles of selected high maintenance rural roads (Tier 4) in order to reduce time spent by road crews on pavement patching.
- Continue inspecting the roads and measuring the PCI on a three year cycle.

7.1 Program Delivery

The program will be delivered using both County crews and private contractors as follows:

- County road crews will perform road preparation work, including asphalt patching, crack sealing and culvert replacement on about 60 miles of roads per year in advance of the chip seal and microseal contracts.
- Contractors will provide asphalt overlays for 20 miles in the first year and 5 miles in each of the following years. Pavement preparation for these overlays will be included with the contract work.
- Using SAP, the Department will monitor the maintenance efforts by the County road crews. Those road segments with excessive maintenance costs will be identified for thin maintenance overlays.

Table 7-1 Anticipated Five-Year Plan Results

Tier	Description	Existing Mileage		Forecast Mileage	
1	“Good” Roads	697	63.9%	793	72.6%
2	“Poor” - High Demand Roads	13	1.2%	0	0.0%
3	“Poor” - Medium Demand Roads	125	11.4%	105	9.6%
4	“Poor” - Low Demand Roads	257	23.5%	194	17.8%
Totals		1,092	100%	1,092	100%
Overall PCI		61		59	

Note: Results based on \$11.2 M the first year and \$6.2 M in each of the remaining years.

8. Options to Fill the Funding Gap

8.1 Funding Options

The current variance in HUTA and revenues are insufficient to meet the needs Statewide and at the County level.

A. Current Funding Sources (\$4.0M General Fund and \$1.5M Road Fund)

- Gas Tax (HUTA) – Directed to County of San Luis Obispo based on 18 cents per gallon plus an adjusted amount set by the Board of Equalization
- Transportation Development Act (TDA) – Funding provided through San Luis Obispo Council of Governments for $\frac{1}{4}$ cent sales tax revenue.
- General Fund – varies, typically \$8M.

B. Potential Funding at the State Level

At the start of 2015, the Governor indicated his support for moving forward with solutions to maintain the California street network. Currently, several proposals are being considered that would either stabilize funding or create/re-designate funding toward local government needs. These include the following:

West Templeton

- SB 16 (Beall) – Comprehensive fund initiative to address the stated maintenance shortfall. Would provide over \$3 billion annually through a combination of redirecting vehicle weight fees to the transportation fund, adding a ten cent per gallon gas tax, and providing an additional \$35 vehicle license fee (\$100 for electric vehicles).
- SB 321 (Beall) – Correction to the gas tax calculation which will utilize a three year average which will result in less abrupt changes in the revenue stream.
- AB4 (Linder) – Separate measure to redirect existing vehicle weight fees for annual distribution to agencies (Approximately \$1 billion in annual revenue). These funds are currently spent under the State general Fund for previous transportation debt payment.

Coming out of the recession period, there appears to be renewed interest to address shortfalls in transportation. The State's basic gas tax has remained unchanged at 18 cents per gallon since 1993. Representatives understand that this source alone is insufficient for State and local systems. While there is much discussion about a "Road Use" fee, whereby vehicles would be charged based on their annual mileage traveled, the concept is years away from implementation. Senate Bill 16 has been put forward, as at least a bridge, to fill the funding gap while the alternative revenue systems are developed.

C. Potential Funding at the Local Level

If action is not taken at a State level, local options that could be explored are as follows:

- **Regional Sales Tax (County Wide) Transportation Authority**

The Self-Help Counties Coalition (SHCC) is an organization of 20 local county transportation agencies delivering super majority voter-approved transportation sales tax measures throughout California. A majority of these counties had a pavement condition index in the 50 to 69 range (at risk) with three in the 71 to 80 range, "Good", and only one of these counties in the 25 to 49 range (poor) based on the 2010 data. Collectively, these "local transportation sales taxes", generate roughly \$2.5 billion per year for the support of capital investments in new highways and transit systems and the maintenance and operation of existing ones.

- **General Sales Tax (unincorporated)**

A general tax imposed for general governmental purposes including road maintenance.

- **Special Sales Tax (unincorporated)**

A special tax means any tax imposed for specific purposes which is placed into a general fund.

- **Parcel Tax (ad valorem)**

A parcel tax levied to be used for any type of spending including construction costs and other projects or spending needs.

- **Vehicle License Fee Enhancement**

The Vehicle License Fee (VLF) is based on the value of the vehicle and is collected upon original registration and registration renewal and would include an incremental amount or enhancement to be used for a designated purpose.

- **Local Gas Tax Enhancement**

Local sales tax on gas would include an incremental amount or enhancement to be used for a designated purpose.

- **Utility User Tax**

One alternative to increasing the gas tax is the utility user tax or road usage charge which is charged on the number of vehicle miles traveled.

- **Dedicated Transit Occupancy Tax**

This tax is charged when occupying a room or rooms or other living space in a hotel of which an incremental amount could be added to be dedicated for road maintenance.

These options and potential revenue amounts directed toward pavement programs are shown in Appendix G.

South Bay Overlay, Los Osos

9. Conclusion

As part of this update Pavement Management Plan, the analysis has lead to the following conclusions:

- For the expected status quo level of annual funding of \$6.2M program (\$4.7M of General Fund with a continuation of \$1.5M from the Road Fund) the PCI declines from 61 to 58 in five years and 56 in ten years.
- By adding a one-time \$3.0M addition from the General Fund and one time Road Reserves of \$3.5M in FY 2015/16 budget, the PCI increases from 61 to 62 at the end of FY 2015/16 but then decreases under status quo budget to 59 in five years.
- To attain the Board adopted goal of PCI system level 65 in ten years will require an annual budget of \$10.8M.
- To attain an ideal road condition for preventative maintenance of a PCI system level of 70 in ten years requiring an annual budget of \$13.6M.
- Staff has also looked at the system conditions if we act on the previous Board policy to abandon roads serving less the five parcels (a total of about 12 miles). Given the status budget, there is no measurable change from the run, the PCI declines from 61 to 58 in five years.

If increased funding above the status quo level becomes available, the program can be accelerate Tier 2 and Tier 3 roads to be addressed sooner. In order to address certain Tier 4 roads with historic high maintenance costs, limited overlays would be warranted with additional funds provided.

This five-year plan is based on the second scenario above with \$11.7M allocated in the first year and \$6.2M being allocated in each of the following years. This plan will result in the following:

- An overlay of about 20 miles will be completed in the first year and approximately 5 miles in each of the following years.
- 60 miles of “Good” Tier 1 roads will receive surface treatment and continue to be preserved in a good state of repair.
- All 13 miles of Tier 2 roads will be overlayed in the first two or three years. These will then become Tier 1, “Good”, roads and will require greatly reduced maintenance in future years.
- 27 miles of Tier 3 will be overlayed and become Tier 1, “Good”, roads.
- To reduce time spent by road crews on pavement patching, 6 miles of select high maintenance rural roads (Tier 4) will receive a thin maintenance overlay.
- The overall PCI of the road network will drop from the current 61 down to 59 in five years.

Appendix A: Rating Pavement Conditions

The Pavement Management System rates paved roads based on a Pavement Condition Index or PCI. This PCI value describes the percentage of structural life left in the paved surface. A PCI of 100 represents a new properly constructed road while a PCI of 20 represents a very poor road surface at the end of its useful life. Most road users would consider a PCI of 70 or better to be a good road. Likewise, most users will be disappointed in a road with a PCI below 30.

The Department has set a goal of measuring the PCI and inspecting all the paved County Maintained roads every three years. In the years that the roads are not inspected, the PMS software program is able to project conditions from the last inspection performed.

Description of Pavement Categories

Best: New road or newly repaved. Almost no cracks, pavement is smooth and level. Just the very tops of the aggregate beginning to show.

Typical PCI is between 80 and 100.

Good: A little older, maybe ten years since paving. Low-level cracking showing up, aggregate exposed 30%, some smooth patching or utility cuts.

Typical PCI is between 60 and 80.

Fair: 15- to 20-year-old pavement. Extensive low-level cracking, some alligator and block cracking showing up, surface getting very weathered, dips and sags, many patches.

Typical PCI is between 40 and 60.

Poor: 20- to 30-year-old pavement. Medium to high level alligator and block cracking over most the road, some potholes, heavy weathering with aggregate, (individual gravel pieces), actually coming off the road. Poor patches edges breaking down many bumps and dips, some potholes.

Typical PCI is between 20 and 40.

Failed/Bad: Old pavement, probably paved in bits and pieces. Entire road is covered with medium to high level cracking, pieces of pavement can be picked out of road surface by hand, many unfilled potholes, patches on patches, bad dips and sags, may have missing sections of pavement. High level weathering where aggregate may be dislodged by kicking the surface with your foot. It may have bad slippage tearing the pavement. The road would need to be totally reconstructed at this point.

Typical PCI is below 20.

Appendix B: California Statewide Local Streets and Roads Needs Assessment

Prepared by NCE

Executive Summary

California's local street and road system continues to be in crisis.

Every trip begins on a city street or county road. Whether traveling by bicycle, bus, rail, truck or family automobile, Californians need a reliable and well-maintained local street and road system. Unfortunately, these continue to be challenging times for our street and road system due to increased demand and unreliable funding. There is a significant focus on climate change and building sustainable communities, yet sustainable communities cannot function without a well-maintained local street and road system. The need for multi-modal opportunities on the local system has never been more essential. Every component of California's transportation system is critical to providing a seamless, interconnected system that supports the traveling public and economic vitality throughout the state.

The first comprehensive statewide study of California's local street and road system in 2008 provided critical analysis and information on the local transportation network's condition and funding needs. Conducted biennially, the needs assessment provides another look at this vital component of the state's transportation system and once again finds a significant funding shortfall.

The 2014 study sought answers to important questions: What are the current pavement conditions of local streets and roads? What will it cost to repair all streets and roads? What are the needs for the essential components to a functioning system? How large is the funding shortfall? What are the solutions?

Breakdown of Road Centerline Miles by Agency

Responsible for almost 81 percent of the state's roads, cities and counties find this study of critical importance for several reasons. While federal and state governments' regularly assess their system needs, no such data existed for the local component of the state's transportation network prior to the initial study conducted in 2008. Historically, statewide transportation funding investment decisions have

been made without local pavement condition data. This biennial assessment provides a critical piece in providing policy makers with a more complete picture of California's transportation system funding needs.

The goal is to use the results to educate policymakers at all levels of government about the infrastructure investments needed to provide California with a seamless, multi-modal transportation system. The findings provide a credible and defensible analysis to support a dedicated, stable funding source for maintaining the local system at an optimum level. The study also provides the rationale for the most effective and efficient investment of public funds, potentially saving taxpayers from paying significantly more to fix local streets and roads into the future.

This update surveyed all of California's 58 counties and 482 cities in 2014. The information captured data from more than 99 percent of the state's local streets and roads – a level of participation that makes clear the local interest in addressing the growing problems of crumbling streets and roads.

Pavements

The conditions of California's local streets and roads are rolling toward a cliff's edge. On a scale of zero (failed) to 100 (excellent), the statewide average Pavement Condition Index (PCI) has deteriorated to 66 ("at risk" category) in 2014. Even more alarming, 54 of 58 counties are either at risk or have poor pavements (the maps below illustrate the average pavement deterioration that has resulted in each county since 2008). If current funding remains the same, the unfunded backlog will swell from \$40 billion to \$61 billion by 2024.

In order to use taxpayer money wisely, it makes more sense to preserve and maintain our roads in good condition, than to let them crumble further and cost more to fix. The costs developed in this study are based on achieving a roadway pavement condition that the industry calls Best Management Practices (BMP). At this condition level, preventive maintenance treatments (i.e., slurry seals, chip seals, thin overlays) are most cost-effective. Preventive maintenance interferes less with the public's mobility and commerce and is more environmentally friendly than rehabilitation and reconstruction.

The importance of this approach is significant. As roadway pavement conditions deteriorate, the cost to repair them increases exponentially. For example, it costs twelve times less to maintain a BMP pavement compared to a pavement that is at the end of its service life. Even a modest resurfacing is four times more expensive than maintenance of a pavement in the BMP condition. Employing maintenance practices consistent with BMP, results in treating four to twelve times more road area for the same cost.

By bringing the roads to BMP conditions, cities and counties will be able to maintain streets and roads at the most cost-effective level. It is a goal that is not only optimal, but also necessary. This study examines three funding scenarios in order to determine their impacts on the condition of the roads over the next decade. Note that these are in constant 2014 dollars.

- Existing funding levels of \$1.657 billion/year** – this is the current funding level available to cities and counties.
- Funding to maintain existing conditions (\$3.328 billion/year)** – this is the funding level required to maintain the pavement conditions at its current PCI of 66.
- Funding required to reach Best Management Practices (\$7.275 billion/year)** – the optimal scenario is to bring all pavements into a state of good repair within ten years so that best management practices can prevail. After this, it will only require \$2.4 billion a year to maintain the pavements at that level.

Scenarios	Annual Budget (\$B)	PCI in 2024	Condition Category	% Pavements in Failed Condition	% Pavements in Good Condition
				6.2%	56.5%
Current Conditions	-	66	At Risk	6.2%	56.5%
1. Existing Funding	\$ 1.657	55	At Risk	24.5%	52.0%
2. Maintain PCI = 66	\$ 3.328	66	At Risk	19.9%	77.3%
3. Best Mgmt. Practices	\$ 7.275	84	Excellent	0.0%	100.0%

Essential Components

The transportation network also includes essential safety and traffic components such as curb ramps, sidewalks, storm drains, streetlights and signals. These components will require \$31 billion to maintain over the next 10 years, yet there is an estimated funding shortfall of \$20.9 billion.

Bridges

Local bridges are also an integral part of the local streets and roads infrastructure. There are 11,863 local bridges in California. There is an estimated shortfall of \$1.3 billion to maintain the safety and integrity of the bridge infrastructure.

Total Funding Shortfall

The table below shows the total funding shortfall of \$78.3 billion (*constant 2014 dollars*) over the next 10 years. For comparison, the results from the previous updates are also included.

Transportation Asset	Needs (\$B)			2014		
	2008	2010	2012	Needs	Funding	Shortfall
Pavement	\$ 67.6	\$ 70.5	\$ 72.4	\$ 72.7	\$ 16.6	\$ (56.1)
Essential Components	\$ 32.1	\$ 29.0	\$ 30.5	\$ 31.0	\$ 10.1	\$ (20.9)
Bridges	-	\$ 3.3	\$ 4.3	\$ 4.3	\$ 3.0	\$ (1.3)
Totals	\$ 99.7	\$102.8	\$ 107.2	\$ 108.0	\$ 29.7	\$ (78.3)

What are the Solutions?

The conclusions from this study are inescapable. Given existing funding levels available to cities and counties, California's local streets and roads will deteriorate rapidly over the next 10 years. It is alarming that local streets and roads have decayed to the point that funding will need to be doubled just to maintain current conditions.

While bringing the state's local street and road system to a cost-effective best management practice level will require more now, investing in local streets and roads sooner will reduce the need for exponentially more spending in the future. To reach that level – at which taxpayer money can be spent most cost-effectively – will require an additional \$56.1 billion for pavements alone, or \$78.3 billion total for a functioning transportation system, over the next decade. Only \$2.4 billion per year will be needed to maintain the pavements after reaching a level at which they can be maintained with best management practices.

To bring the local system back into a cost-effective condition, thereby preserving the public's \$188 billion pavement investment and stopping further costly deterioration, \$7.8 billion annually in new funds are needed – that's equivalent to a 54-cent-per-gallon gas tax increase.

Failure to invest more would be disastrous – not only for local streets and roads but for California's entire interrelated transportation system. It is imperative that cities and counties receive a stable and dedicated revenue stream for cost-effective maintenance of the local system in order to reverse this crisis.

County (Cities included)	Center Line Miles	Lane Miles	Area (sq. yd.)	2014 PCI	10 Year Needs (2014 \$M)
Alameda County	3,538.15	7,999.12	82,401,946	66	\$2,305

Appendix C: Pavement Rehabilitation Techniques

Crack Seal – Asphalt pavements expand and contract with seasonal temperature changes. Consequently, cracks and joints are expanding and contracting when the pavements move. Fillers do not expand or contract. Sealing the cracks with a flexible rubberized asphalt that bonds to the crack walls and moves with the pavement will prevent water intrusion.

Microsurfacing – A mixture of polymer modified asphalt emulsion, mineral aggregate, mineral filler, water, and other additives, properly proportioned, mixed, and spread on a paved surface. Microsurfacing differs from slurry seal in that it can be used on high volume roadways to correct wheel path rutting and provide a skid resistant pavement surface.

Chip Seal – A surface treatment in which the pavement is sprayed with asphalt (generally emulsified) and then immediately covered with aggregate and rolled. Chip seals are used primarily to seal the surface of a pavement with non load-associated cracks and to improve surface friction, although they also are commonly used as a wearing course on low volume roads.

Thin Maintenance Overlay (1.0") – Maintenance overlays use hot-mix-asphalt of thickness of 1.0 inches to replace the wearing surface of the pavement. It is a common surfacing for paved roads to address roads that require constant maintenance.

Hot Asphalt Concrete Pavement

Photo Source: FHWA-WFLHD

Structural Overlay (>1.5") – Structural overlays use hot-mix-asphalt of thickness greater than 1.5 inches to increase the structural capacity of the pavement. It is the most common surfacing for paved roads in the U.S., accounting for more than 90% of paved roads.

Cold In-Place Recycling and Overlay – The old oxidized pavement surface is removed, recycled and placed back down and compacted. Generally, the old surface has become brittle and cracked and the replacement surface provides improved protection to the underlying layers. The recycled layer is then overlayed with a new layer of asphalt.

Appendix D: Road Maintenance Costs

The road maintenance funding is distributed among many activities other than pavement maintenance. This section will help identify some of the other tasks the roads crews must perform and the many areas where road maintenance funds are spent.

Appendix E: Thin Overlay List

Date Approved: May 2020

Road Number	Location	Description	Lengths	PCI	Maintenance Cost/Mile/Year	5 year cost in SAP
3094	Avenales Ranch	1110 thru 1140	17,296	25	\$1,416	\$23,189

Appendix G: Local Revenue Options

OPTION	ENABLING MECHANISM	ROAD NEXUS	POTENTIAL ANNUAL REVENUE	ADVANTAGES	DISADVANTAGES	COMMENTS
Regional Sales Tax (County wide) Transportation Authority	Revenue Code 7251	Indirect: Accepted measure to address regional needs 2/3 voter approval	Countywide \$20-25 million with 25% to Road Maintenance (\$2-2.5 million to County)	-Provide broad support among many transportation users - Long Term / predictable - Most ambitious program	-Cities have already enacted 1/2¢ sales tax - Would be part of broad transportation package	- SLOCOG conducting survey - 20 Counties has adopted sales tax measures for Transportation Funding - Santa Barbara County has 30 year program adopted
	Public Utility Code 180005					
General Sales Tax (unincorporated)	Revenue Code 7285 (AB 2119) County Code 3.04	Indirect Majority of Cities have utilized 50% voter approval	Approximately \$1.5 million	- Less than 2/3 vote required - Brings County in line with Cities tax level	- No "maintenance of effort" funding clause - Advisory vote use Cities tax level	Requires Advisory vote to direct to Road Maintainance.
Special Sales Tax (unincorporated)	Revenue Code 7285.5 (AB 2119) County Code 3.04	Indirect; 2/3 voter approval	Approximately \$1.5 million	- Secures funding for specific use	- Would require a MOE clause so as not to displace current funding.	Unaware of agency which has passed
Parcel Tax (ad valorem)	Revenue Code 75.10	Direct; parcel do require roads for access. Use not tied to specific porcel 2/3 voter approval	Potential 0.00023% of Assessed value Or \$23.50 per \$100,000 of assessed value provides for \$ 150,000,000 bonding capacity	- Could be used to issue G.O Bonds for system upgrade - Assessed by property value undeveloped lots (non-road users)	- Most parcels have relatively good roads fronting their parcels within urban areas	Grover Beach is example. For \$150,000,000, the system would be upgraded to a PCI level of 70 which would allow for future maintenance to be done using lower costs seal coat efforts with occasional overlays.
Vehicle License Fee Enhancement	Revenue Code 11106 Allows \$10 max charge	Direct users fee 50% voter approval	Approximately 108,000 licensed vehicles in unincorporated =\$1.1 million	- Direct/ reliable funding - Clear connect to roadway use	- Insufficient funding to cover needs	\$10 annual limit by statue caps this option. Would need to seek legislative revision to raise annual collection to \$ 25 annually to meet maintenance needs
Local Gas Tax Enhancement	Revenue code 9501 Requires distribution Agmt between Cities- County	Direct users fee 50% voter approval	An additional 10 cent per gallon local gas tax would generate approximately \$ 3,000,000 annually for the County	- Collects revenue from County visitors/ Route 101 corridor traffic	- Further increases area's fuel cost	When surveyed by SLOCOG in 2011, response can very low at 22% support
Utility User Tax	Revenue code 7284.2 50% voter approval	Indirect	A 3% utility Tax would generaerate \$ 5-6 million annually	- Provides for wide range of contribution	- No set nexus	Consideration for other County needs (services, CIP) Already in place for the cities
Dedicated Transit Occupancy Tax	Revenue code 7280 County Code 3.08	Indirect use; Traveler's Access 2/3 voter approval	\$900,000 based on 1% increase to 10% level (equal to Cities)	- Brings County in line with Cities tax level - Provides for "out of area" user collection of revenues	- Insufficient funding to cover needs - Revenue desired for other "Enhancement" services - Lodging has tourist business District vote	Consideration for other County needs (services, CIP)

Appendix H: Five-Year Asphalt Concrete Overlay List

Date Approved: May 2021
